

32 TONNE

The 32T body is our heaviest duty rigid body design, compatible with any 8x2 or 8x4 Chassis fitted with rear air suspension, and is available with any of our ramp systems. It has the strength to carry payloads up to 18-19 tonnes, but remains the lightest 32T heavy duty body on the market, giving you maximum payload.

The Higher Standard.

OVERVIEW

With unlimited flexibility, this product can be specified for the transportation of a huge variety of machines, from large boom and scissor lifts for the access industry to the transportation of up to 13-14T excavators for the plant hire industry, as well as many combinations of smaller machines.

The 32T plant body is also suitable for chassis fitted with front mounted lorry loader cranes. This makes it perfect for transporting up to 20 and 32 foot cabins and welfare units, when specified with fold-forward Cheesewedge ramps. The Sterling fold forward ramps give a totally flat deck when folded, ideal for transporting any non-powered equipment, giving maximum usable deck space.

This body can be specified with up to a 9.5 metre deck length, when fitted to a chassis with a day cab. Furthermore, all configurations come as standard with galvanized ramps and headboards, for maximum corrosion protection and therefore longevity and lower maintenance costs.

Peace of mind is also guaranteed with build times, as we hold National Small Series type approval for most Chassis configurations, meaning we are not reliant on IVA testing to meet delivery dates.

As the UK's largest manufacturer of plant bodies, you can have confidence in our team and the product and service that we supply, due to the many years of collaboration with our customers that has formed the products we offer today.

WHY CHOOSE STERLING?

1 THE HIGHER STANDARD

Our stringent Quality Assurance processes, combined with high quality materials and CE marked components, guarantee the reliability of the product and minimise down-time. Those exacting standards extend to our customer service too, the Sterling culture of integrity means responding quickly and keeping you informed at every stage of the process.

2

BUILT TO LAST

Our products are built using only the finest and strongest materials, finished off with a galvanising process that ensures they stand the test of time. This eliminates the need for costly maintenance, making the cost of ownership lower. It also means that many truck manufacturers value a truck fitted with a Sterling body with up to 10% higher residual value.

3

INSIGHTFUL INNOVATIONS

Intelligent additions, like our electro-hydraulically operated ramps, not only save effort, they save fuel too. That means lower operating costs overall. Or how about something you can't put a price on? The unique shallow loading angle of our cheesewedge ramp dramatically improves loading safety, giving you peace of mind.

4

SMART DESIGN

Intelligent innovations are made all the better when they are easy on the eye. Our clean aesthetics give a visual boost to your brand image, hiding rams on our cheesewedge design and keeping overall clutter to a minimum.
