

# MEGALOAD

The go-to choice for heavy-duty machines such as general plant equipment, excavators, dumpers, and rollers.

## Specification

Available 14-32T GVW with 6-9.7m internal deck length. Heavy-duty low-profile beavertail body built with high tensile I-beam crossmembers, which are threaded through the body runners. Crossmembers spaced at nominal 300mm centres for superior point loading. Double bend beavertail section with round steel bar at each break-point for enhanced strength and ease of use.

Main body shotblasted, cleaned and then painted in two-pack paint, in customer specified RAL colour. Headboard, ramps and other steel components hot-dip galvanised for maximum protection.

All electrics fed through single gully enclosed wiring loom with sealed boxes and super seal connections, to protect wiring from corrosion and water ingress. Provided as standard, low-profile beacons are fitted to the rear corners.

Vehicle fully type approved with most common chassis covered under Whole Vehicle Type Approval certification.

### SIDE RAVE

Heavy duty Angle side rave

### HEADBOARD

Heavy duty 1600mm painted headboard  
ChainLock bars to headboard  
Fixed worklights to headboard
