

NEW **MEGALOAD**

The go-to choice for heavy-duty machines such as general plant equipment, excavators, dumpers, and rollers.

Specification

Built stronger, built to last. Our new Megaload beavertail body is more heavy duty than previous models, which delivers greater strength, durability, and reliability. This includes heavier gauge side raves and additional support under each break point to cope with the demands of heavy plant. Available from 26-32T GVW with 6.0-9.7m deck lengths, it features high-tensile I-beam crossmembers at 300mm centres for outstanding point-load strength.

The reinforced beavertail design, galvanised steel components, and durable two-pack paint finish provide maximum protection against wear and corrosion, while the fully enclosed electrical system ensures long-term reliability in tough operating conditions.

Fully type approved and available on a wide range of chassis, this is our toughest and most durable beavertail body yet.

SIDE RAVE

Heavy duty 150x75x10mm
S355 high-grade steel
Angle side rave
